

SYLLABUS OF INFORMATICS ENGINEERING DEPARTMENT

Course Code	BAI20103J						
Course Name	Artificial Intelligence (AI)						
Credit Value	3 (3+0)						
Course Classification	Core						
Semester	2						
Synopsis	Artificial Intelligence (AI) course is a field of computer knowledge that is intended to create software that can mimic human intelligence. This course describes methods for making software smarter, more logical and more useful for helping humans solve problems using artificial intelligence techniques. Intelligence techniques include search/tracking techniques, knowledge representation and logic, expert systems and soft computing, namely fuzzy logic, genetic algorithms, and artificial neural networks.						
Course Learning Outcome (CLO)	At the end of the course, students will be able: <table border="1"> <tr> <td>CLO1</td><td>Student know the basic of Artificial Intelligence and how it works</td></tr> <tr> <td>CLO2</td><td>Student can develop of AI and implement them systematically in several simple cases with programming languages, which can be used in modeling and designing applications in the field of information technology.</td></tr> <tr> <td>CLO3</td><td>Students are able to implement several algorithms used in the field of AI with the programming language they master.</td></tr> </table>	CLO1	Student know the basic of Artificial Intelligence and how it works	CLO2	Student can develop of AI and implement them systematically in several simple cases with programming languages, which can be used in modeling and designing applications in the field of information technology.	CLO3	Students are able to implement several algorithms used in the field of AI with the programming language they master.
CLO1	Student know the basic of Artificial Intelligence and how it works						
CLO2	Student can develop of AI and implement them systematically in several simple cases with programming languages, which can be used in modeling and designing applications in the field of information technology.						
CLO3	Students are able to implement several algorithms used in the field of AI with the programming language they master.						
Prerequisite / Corequirisite (if any)	-						
Name(s) of Academic Staff	Anindya Ananda Hapsari, S.ST., M.IT						

Topics and Delivery Hours (F2F)	No	Topic	Hours
	1	Introducing of Artificial Intelligence	2
	2	History, definition, example of AI	2
	3	Definition and Sample of Smart Agent	2
	4	Start Programming with Python	2
	5	Searching Algorithm	2
	6	Natural Language Processing DBA	2
	7	Natural Language Processing TTS	2
	8	Algorithm AI Implementation NLP	4
	9	Machine Learning Model	4
	10	Supervised and Unsupervised Learning	4
	11	Implementation of Expert System	4
	12	Artificial Neural Network	4
	13	Sentiment Analysis	4
	14	Implementation of AI algorithms to solve the problem.	4
	TOTAL HOURS (F2F)		42
Assessment Methods	1. Assignment (30%) 2. Quiz (10%) 3. Mid Semester Assessment (20%) 4. Assessment (40%)		
Special Requirements / Resources (Eg Software, Computer Lab, Simulation Room etc)	-
